

# MAGIFIX

ADHESIVE NON WOVEN

**FOR PRIVATE LABELS**

## MAGIFIX

STRUCTURE:

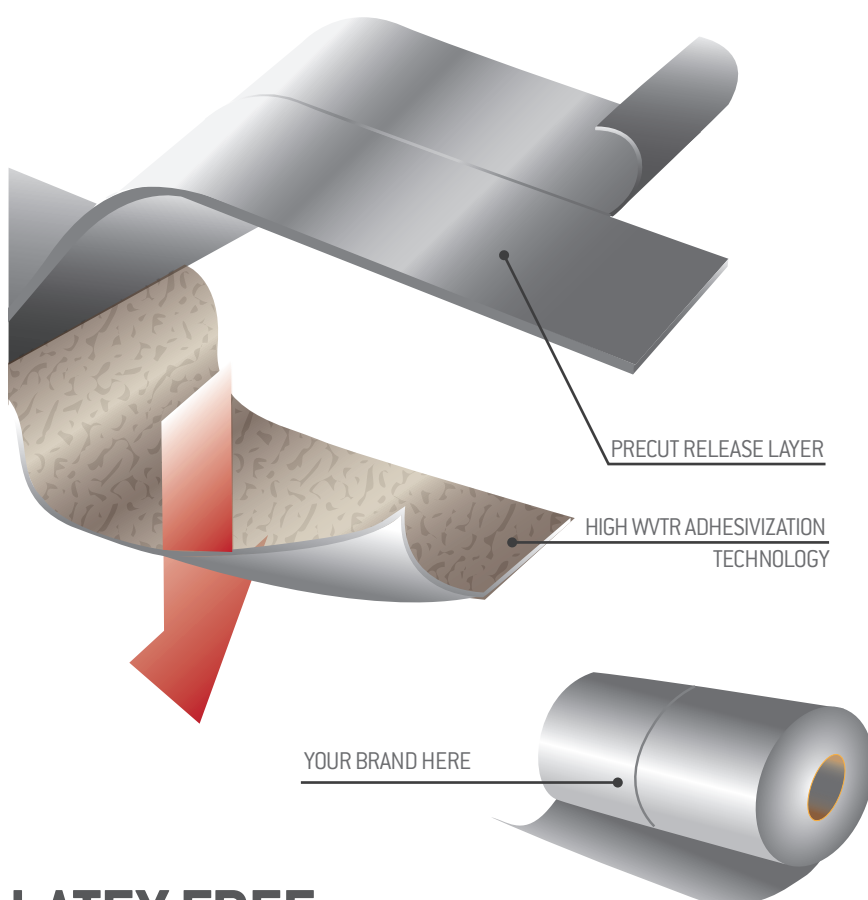

Magifix is an elastic nonwoven surgical tape, particularly used for the fixation of medications.

Magifix guarantees air permeability and long-term strong adhesion thanks to the innovative coating technology UFD (Uniform fiber deposition) with Hot-Melt adhesive (without solvents).

This wound dressing, thanks to its transversal elasticity, can also be fixed on active body parts and joints.

Magifix is available in rolls having minimum width of 2.5 cm, minimum length of 2.5 meters or in jumbo rolls.

As Magifix is produced for private labels, the CE certification is upon the final customer.

**LATEX FREE**

## The benefits

- Air permeable
- Biocompatible
- No adhesive residue when removed (solvent free)
- X-ray permeable
